DOE Encourages 33 Regional Clean Hydrogen Hubs Applicants to Submit Full Application

Last week, the US Department of Energy's Office of Clean Energy Demonstrations (OCED) sent highly-anticipated notices in response to concept papers submitted by applicants for the Regional Clean Hydrogen Hubs (H2Hubs) program. OCED notified potential applicants if they were "encouraged" or "discouraged" from submitting a full application later this spring. After evaluating the concept papers, they encouraged 33 of 79 total applicants to submit a full application before April 7, 2023. Broadly, applicants discouraged from submitting a full application focused on one aspect of a hub, did not adequately help support a national hydrogen network or relied heavily on technology not ready for commercial development.

OCED is likely to make final selections on hubs in the Summer of 2023, with up to 7 billion in funding available for 7-10 regional hubs. Although OCED did not publicly share which applicants were encouraged to apply, all applicants are free to share their status. At least 10 of the 33 applicants have shared their positive status.

Minnesota PUC to Require Additional Environmental Impact Statement for Summit Carbon Solutions Carbon Dioxide Pipeline Application

"The Minnesota Public Utilities Commission formally accepted Summit Carbon Solution's route permit application for a carbon dioxide (CO2) pipeline that will stretch 28 miles from the Green

Plains Ethanol Plant near Fergus Falls, Minn. to Breckenridge, and into North Dakota. Accepting the application as complete begins the permitting process that will involve many opportunities for public engagement as the record is developed. The Commission also ordered the preparation of an Environmental Impact Statement (EIS), the most comprehensive form of environmental review under state rules." Read more here

Clean Air Task Force is Hiring Regional Policy Managers (Western, Northeast, Southeast, Gulf Coast)

CATF's regional policy managers will lead the work of CATF's U.S. State Policy Program to advance a range of decarbonization strategies at the regional and state levels. This involves working collaboratively with members of the U.S. State Policy Program and other CATF programs to deepen CATF's engagement with policymakers and stakeholders. The regional policy managers will leverage strong relationships, a keen understanding of political dynamics, and technical and policy knowledge to advance CATF's work through direct engagement with policymakers, coalition building, strategic communications, private sector collaborations, and other activities.

Applications will be reviewed on an ongoing basis, with priority given to those received by January 20. Apply through CATF's website.

Wisconsin's Circular Bioeconomy – Carbon Management Workshop | Wisconsin Energy Institute

This is the second of three workshops exploring the development of a circular bioeconomy ecosystem in which renewable and waste resources are used as raw materials, substituting biomass-based and recycled carbon for fossil carbon in energy and products. Developing these bio-based production chains and businesses could create jobs, help decarbonize Wisconsin industries, and promote statewide rural economic development.
